SUBJECT INDEX

Activin A and B, embryonic skeletal development 48
Acute phase proteins, induction by oncostatin M 162
Adipogenesis, regulation by interleukin-11 200
Adipogenesis inhibitory factor (AGIF) 192
  molecular cloning of cDNA 193
AIDS patients, NKSF/IL-12 365
AIDS-related Kaposi's sarcoma cells, effect of oncostatin M 161
Amphiregulin, role in cancer 9
Amyotrophic lateral sclerosis, CNTF 141, 148
Angiogenesis, TNF 124
Angiogenic factors, FGF and wound healing 31
Antigen presenting cells, interleukin-10 210
Anti-inflammatory agent, interleukin-10 215
Arthritis
  cytokine system 249
  growth factors 61
  LIF 347
  TNFα 125, 353
Autoimmune disease, TNFα in rheumatoid arthritis 247–255

B cells
  NKSF/IL-12 production 356
  stimulation by interleukin-10 211, 219
Beckwith–Wiedeman syndrome, IGF-II 267
Bibliographic update
  growth inhibitors 291–300
  insulin-like growth factor 171–190, 383–397
  platelet-derived growth factor 85–96
Biglycan, TGF-β interaction 377
Bone
  growth factors and embryonic development 46
  LIF 337–353
Bone marrow 191
  adipogenesis 193, 200
  interleukin-10 and hemopoiesis 217, 219
  interleukin-11 and hemopoiesis 196, 197
Bone marrow regeneration
  interleukin-10 220
  LIF 346
Bone morphometric proteins-2B and 3 49
Brain-derived neurotrophic factor 139, 140
Breast cancer
  c-*erb*B-2 5, 13
  FGF receptor genes 79

Cachexia, TNF 128
Cancer
  TNF 125
  anti-tumour action in animal models 126
  cachexia in animal models 128
  clinical trials in humans 129
  enhancement of tumour spread in animal models 128
  production by human ovarian cancer 130
  type 1 growth factor receptors 1–24
Cartilage growth plate 45, 46, 50
Cell-mediated immunity 207
  interleukin-10 212, 221
c-*erb*B-2 proto-oncogene 4, 13
c-*erb*B-2 receptor, potential ligands 12
c-*erb*B-3 proto-oncogene 6, 13
Chemoimmunotherapy 241
Chemotherapeutic agents, interleukin-2 combination in treatment of malignant tumours 239
Cholinergic neuronal differentiation factor 338
Chondrocalcinosis 61
Chondrocytes 45, 50, 56
Chondrogenesis 46–68
Ciliary neurotrophic factor (CNTF) 139, 157
  biological actions 140
  gene structure 162
  molecular cloning of binding protein 141
  receptor 165
    distribution and CNTF targets during development 148
    roles 150
    signal transduction 142
    structure 142, 358
  role during embryogenesis and as a muscle-derived factor 149
  role in injury 149
Cisplatin, interleukin-2 combination treatment 241
Collagen, IGFs 57
Collagen induced arthritis
  cytokine system 247
  TNFα 253
Connective-tissue wound contraction 26, 34
Cripto 12
Cyclophosphamide, interleukin-2 combination treatment 241
Cytokine inhibitors 252
Cytokine receptors 122, 142
Cytokine synthesis inhibitory factor (CSIF) 208, 210

Decarbazine, interleukin-2 combination treatment 241
Decorin 373
  in vivo effects 380
  in vivo pharmacokinetics 379
  TGF-β interaction 377

Development, IGF-II 263, 277
Differentiation-inhibitory activity 338
Doxorubicin, impaired wound healing, TGF-β 36

Embryo
  growth factors and skeletal development 46
  IGF-II and receptors 277, 280
Embryonic stem cells, effect of oncostatin M 161
Epidermal growth factor (EGF)
  structure and functions, cancer 7
  tyrosine phosphorylation of phospholipase C 100
  wound healing 28
Epidermal growth factor receptors and ligands, role in cancer 1–24
Erythroid progenitors
  interleukin-10 217
  interleukin-11 197
Extracellular matrix, TGF-β interaction 327, 329, 370, 372
  decorin pharmacokinetics 379
  integrin expression 375
  protease activity 374
  proteoglycan interactions 373, 377

Fetus, skeletal development and chondrogenesis 46
Fibroblast growth factors (FGFs)
  cellular localisation 113
  chondrocyte replication 56, 59
  disease and repair of articular cartilage 61
  embryonic skeletal development 47
  epiphyseal growth plate 52
  responses in various cells 70
  tyrosine phosphorylation of phospholipase C 100
  wound healing 30
Fibroblast growth factor gene family 69
Fibroblast growth factor receptors
  biochemical characterisation 70, 107
  cell distribution 107
  collaboration of high and low affinity receptors in FGF binding 75
  expression 76
  genomic localisation of genes and involvement in disease 79
  internalisation 112, 113
  ligand binding 74
  molecular cloning 71
  signal transduction 70, 77
  subtypes 73
  tissue distribution and mRNAs 109
Fibroblasts
  effect of oncostatin M 162
  wound healing 27
Fibronectin, TGF-β interaction 373
Fibrotic disease, TGF-β 370

Glomerulonephritis
  decorin pharmacokinetics 379
  TGF-β 370, 374
gp130 144, 147, 164
G proteins, phospholipase C regulation 103
Granulocyte colony-stimulating factor 142, 157
  gene structure 162
  receptor 165
Growth factor receptors, type 1, involvement in cancer 1–24
Growth hormone 162
  IGF-1 interaction 55
  receptors 165
Growth inhibitors, bibliographic update 291–300
Growth promoting agent (GPA) 149

Haemorrhagic necrosis, TNF 127, 129
Hematopoietins 158, 164
Hemopoiesis 191
  interleukin-10 216, 219
  interleukin-11 197
Heparan sulfate, FGF receptor binding 110
Heparin, FGF interaction 70
Heparin-binding epidermal growth factor (HB-EGF)
  cancer 10
  wound healing 28
Hepatic cells, effect of oncostatin M 162
Hepatocyte stimulatory factor III 338
HER-2 4
Heregulin 7, 12
HIV+ patients, NKSF/IL-12 365
Horton's arthritis, LIF 347
Huntington's disease, FGF receptor genes 79
Hybrid receptor, IR/IGFR 301, 312

Immunity 207
  HIV infection, NKSF/IL-12 365
  interleukin-10 210, 212, 216, 222
Immunotherapy, interleukin-2 229, 241
Impaired wound healing, TGF-β 36
Infectious disease, TNF 125
Inflammation
  interleukin-10 213
  macrophages and growth factors 26
  oncostatin M 162
Inflammatory joint disease 61
  TNF 125
Insulin, collagen synthesis 58
Insulin dependent diabetes mellitus 247, 248
Insulin-like growth factor (IGF), bibliographic update 171–190, 383–397
Insulin-like growth factor I
  chondrocyte replication 57, 59
  disease and repair of articular cartilage 61
  embryonic skeletal development 48
  epiphyseal growth plate 54
  growth hormone interaction 55
Insulin-like growth factor I receptor 270, 301
  activation and tyrosine kinase 307
  gene structure and function 303

intracellular signalling 308
ligand binding 305
signalling specificity 311
structure 303
subtypes 312
Insulin-like growth factor II 257
binding proteins 276
biological actions 279
biosynthesis 261
cellular mechanism of action 280
chondrocyte replication 57, 59
developmental regulation 277
embryonic skeletal development 48
epiphyseal growth plate 54
gene expression 262
structure 259
tissue distribution 277
tumours 267
Insulin-like growth factor II receptor 269, 272, 277
Insulin receptor (IR) 301
activation and tyrosine kinase 307
gene structure and function 303
intracellular signalling 308
ligand binding 305
signalling specificity 311
structure 303
subtypes 312
Insulin receptor-related receptor (IRR) 302
INT-2, embryonic skeletal development 47
Integrin, TGF-β and expression of 375
α-Interferon, interleukin-2 combination in treatment of malignant tumours 237, 238
Interferon-β, induction of production by NKSF/IL-12 359, 362, 365
Interleukin-2, clinical applications
combination with chemotherapeutic agents 239
combination with LAK cells 233
combination with other cytokines, immunomodulators or monoclonal antibodies 237
combination with TIL 236
single agent treatment 230
Interleukin-6 145, 157, 161
gene structure 162
receptor 165, 358
Interleukin-10
antigen presenting cells 210
B cell stimulation 211
bone marrow regeneration 220
cell-mediated immunity 212
hemopoiesis 216
molecular characterisation 208
therapeutic use 221
Interleukin-11
early hematopoietic progenitors 197
erythroid progenitors 197
gene 163, 194
megakaryocyte progenitors 195
molecular cloning of cDNA 193
myeloma cells 195
protein structure 194
receptor and signal transduction 164, 201
regulation of adipogenesis 200
regulation of antigen-specific antibody responses 199
regulation of hepatic acute-phase responses 200
therapeutic potential 202
Interleukin-12
HIV seropositive and AIDS patients responses 365
lymphocyte-mediated cytotoxicity 360
lymphokine production 359
molecular structure and receptors 356
physiological roles 362
production 361
regulation of T and NK cell proliferation 360

Kaposi's sarcoma cells, effect of oncostatin M 161
Keratinocyte autocrine factor (KAF) 10
Keratinocyte growth factor (KGF)
embryonic skeletal development 47
wound healing 31
Keratinocyte growth factor receptor 74
Kidney disease, TGF-β 370

Lamellipodial crawling 26
Latency associated peptide, TGFα 322
Leukemia cells, oncostatin M 160
Leukemia inhibitory factor (LIF) 142, 144, 150, 157, 161, 338
action on bone *in vitro* 339
action on bone *in vivo* 343
bone disorders in humans 347
pathological effects 344
specific effects 346
chromosomal localisation 164
gene structure 162
receptor 165
Lymphokine, induction by NKSF/IL-12 359
Lymphokine-activated killer (LAK) cells
interleukin-2 combination in treatment of malignant tumours 229, 233, 241
NKSF/IL-12 induced generation 360
Lymphopoiesis, interleukin-10 218
Lymphotoxin 122

α2-Macroglobulin, TGF-β complex 324
Macrophages
interleukin-10 inhibits cytokine production 215
wound repair 26, 33
Malignant melanoma, interleukin-2 in treatment 231, 233, 237, 240
Mannose 6-phosphate receptor, IGF-II 272, 275, 277, 280
Mast cells, interleukin-10 and development of 218
Megakaryocytes
interleukin-10 217
interleukin-11 195

Melanoma-derived lipoprotein lipase inhibitor 338
Motor neuron disease, CNTF 141, 148
Mucopolysaccharides, IGFs and synthesis of 57
Myeloma cells
  interleukin-10 217
  interleukin-11 195
Myofibroblasts 27

Natural killer cells
  interleukin-10 210
  NKSF/IL-12 360
Natural killer cell stimulatory factor (NKSF)
  HIV seropositive and AIDS patients responses 365
  lymphocyte-mediated cytotoxicity 360
  lymphokine production 359
  molecular structure and receptors 356
  physiological roles 362
  production 361
  regulation of T and NK cell proliferation 360
Nerve growth factor 139
Nerve injury, CNTF 149, 150
Neuro-activating factor (NAF) 13
Neurotrophic factors 139

Oncogene
  c-*erb*B-2 4, 13
  c-*erb*B-3 6
Oncostatin M (OSM) 157
  gene structure 158
  in vitro effects 160
  protein structure 158
  receptors 164
  relationship with other cytokines 162
  signal transduction 166
Osteoblasts, LIF 340
Osteoclast-activating factor 338, 339
Osteoclasts, LIF 339
Osteogenin 49
Ovarian cancer, TNF production 130

Parasites, interleukin-10 and cell-mediated immunity 213
Peptide growth factors, chondrogenesis 45–68
Phosphatidylinositol, receptor coupled hydrolysis 98
Phosphatidylinositol 3-kinase, insulin and IGF 309
Phospholipase C isozymes 97
  cellular and subcellular localisation 99
  regulation by G proteins 103
  regulation by serine phosphorylation 102
  regulation by tyrosine phosphorylation 99
  structure 98
Plasmacytoma cells, interleukin-11 195
Plasmin, TGF-β 374
Platelet-derived growth factor (PDGF)
  bibliographic update 85–96
  tyrosine phosphorylation of phospholipase C 100
  wound healing 32, 35
Profilin 2
Proteoglycans
  FGF binding 70
  TGF-β interactions 373, 377

ras p21, IR and IGFR 309, 310
Renal cell carcinoma, interleukin-2 treatment 231, 234, 240, 241
Rheumatoid arthritis
  cytokine inhibitors 252
  cytokine system 249
  growth factors 61
  LIF 347
  TNFα 125, 253

Scar tissue formation 27, 37
Schwann cells, CNTF 149
Schwannoma-derived growth factor 10
SH2 domains 308
Signal transduction
  CNTF 142
  EGFR abnormalities 3
  FGF receptors 70, 77
  interleukin-11 201
  oncostatin M 166
Skeletal development 46
Skin, growth factors and wound healing 25–44, 374
Stem cells, interleukin-10 216
Stromal cells 191
  interleukin-10 219
  interleukin-11 192, 200

T cells
  interleukin-10 210
  NKSF/IL-12 360, 362
Thymocytes, interleukin-10 219
Tissue repair 25
  TGF-α 34, 370
Transforming growth factor-α (TGF-α)
  cancer 8, 14
  wound healing 28
Transforming growth factor-β (TGF-β) 321
  activation 325
  chondrocyte replication 58
  decorin pharmacokinetics 379
  disease and repair of articular cartilage 61
  embryonic skeletal development 48
  epiphyseal growth plate 55
  extracellular matrix synthesis 372
  integrin expression 375
  latency 322
  α2-macroglobulin complex 324
  physiological activity 369
  protease activity 374
  proteoglycan interactions 377
  structure 322
  therapeutic interventions 329

wound healing 34, 370
Tumour immunity, TNF 127
Tumour-infiltrating lymphocytes, interleukin-2 combination in treatment of malignant tumours 236
Tumour necrosis factor (TNF)
cancer 125
anti-tumour action in animal models 126
cachexia in animal models 128
clinical trials in humans 129
enhancement of tumour spread in animal models 128
production by human ovarian cancer 130
cell regulation 123
inflammatory, infectious and autoimmune diseases 125
inhibitors 252
production 122
receptors 121, 252
rheumatoid arthritis 250–254
Tumours, IGF-II expression 267
Tyrosine kinase
FGF receptors 70
IR and IGFR 307
neurotrophins 140
phospholipase C regulation 99

Vaccinia virus growth factor (VVGF) 12
Vascular endothelium, TNF 124
Viral growth factors 11

Wilm's tumour, IGF-II 267
Wound healing 25
EGFs 28
FGFs 30
impaired 36
macrophages 26
myofibroblasts 27
PDGF 32, 35
scarring 27, 37
TGF-β 34, 370
tissue remodelling 27

Printed and bound in Great Britain by BPC-AUP Aberdeen Ltd.
